Netcompany offers its powerful GetOrganized ECM Platform for Microsoft SharePoint utilizing Microsoft Azure

Netcompany A/S recently announced that they will make their GetOrganized product available on an Azure based Microsoft SharePoint for customers seeking compliant ECM feature sets, corporate governance and support for large scale document repositories in the cloud.

GetOrganized is a powerful control, feature and governance suite for SharePoint, that has been on the market for more than a decade and is managing some of the most sophisticated and integrated usages of SharePoint for case and document management in the world.

GetOrganized has proved itself as the power tool to enable SharePoint as a case and document management platform, within multiple industries and offers itself as a broad and generic platform tool, used to configure self-contained or cross-functional workflows for case, matter and document work. Through strong integration with Microsoft Office and Outlook, document and email capture, storage, preservation and management happen seamlessly and within natural working habits.

Examples of workflows supported by the GetOrganized platform are legal matters, projects, contracts, employee files, recruitment, board and meetings, citizen services, client services, administrative casework, sales and bid management and much more.

GetOrganized is often placed within an IT enterprise architecture as a DMS repository combined and integrated with e.g. Microsoft Dynamics CRM or ERP platforms to deliver a robust, secure and governed DMS layer. By enabling GetOrganized availability on Azure, customers seeking document support within Microsoft CRM or other platforms now have the possibility to combine the best of SharePoint and Office with their remaining platforms on the Azure stack.

By utilizing Microsoft Azure, Netcompany offers high-performance and high-availability SharePoint farms optimized for structured and organized usage, fulfilling strict information governance, securing important business documents and information.
